# Intelligent Household Control: Immax NEO

***Welcome to the world of Immax NEO... a world where the household has justly got the smarter. A world in which the color of lighting is taking on a whole new dimension, one in which you feel completely safe in an environment where you are free to enjoy superb designs and relax in limitless comfort of the senses.***

**Introducing Immax NEO system allows you to control your home, smartphone, tablet or computer, alarm, cameras, or even door locks. Just a few clicks will illuminate your home with all your favorite colors and create the right environment for your every moment. Your apartment will be safe and you will have the perfect overview even when you are away. It happened.**

***„We believe in perfect light it creates an unforgettable atmosphere.“***

Our lighting systems bring a new dimension to interior lighting. They create a pleasant atmosphere, completing as well as enlarging interior spaces and are an original and innovative element of every room. Immax NEO lighting systems are intended for everyone who would like to escape the mundane. We are the first in Central Europe to offer designer lamps and bulbs of very high luminosity with the choice of hundreds of color combinations.

***„Close your eyes and imagine your home as a large painting canvas. Fantasy becomes your limitless muse with our products being the brush and paint.“***

Immax NEO and NEO LED actuators and smart bulbs with features are able to shine in warm or cool tones, using white light and color as well as being able to flash or dim serenely. Immax NEO smart light bulbs are available in several shapes and different socket bases.

You may control all available functions of your smart lighting - variable light intensity, thermal color, light tones and even time lighting modes in different parts of your home. Another benefit of the four-in-one system allows you to control temperature, humidity and light levels depending on the ambient light intensity, and you don't even have to be present.

***„Your house will look ‚lived-in‘ for the neighborhood, even if you're far away.“***

The heart of the entire system is the intelligent server of Immax NEO. It allows you to control and communicate with each individual light source or groups of light sources from your phone, tablet or by using the Immax NEO remote control. In just one smart gateway, more than a hundred smart bulbs or controls can be connected.

NEO is based on the tried-and-tested ‚ZigBee 3.0‘ technology, which represents the most advanced smart home solution. It is designed to be able to connect, in the future, all home electronics devices to just one, simple control system.

***„Peace of mind begins at home.“***

Immax NEO makes your home safe. Whenever someone enters your home in your absence, the system will inform you immediately. One click can lock the door, set the alarm or draw the blinds. You may have a complete overview of what is happening in your home even though you are hundreds of kilometers away. Part of the system can also include smart cameras that allow you to view and record realtime footage of your property.

***At Immax NEO, we believe you will enjoy our progressive products and delight in a smart home management system that will greatly improve your quality of life and light up your home with all the colors of your imagination.***

# LEGEND

**Led** – the luminaire is fitted with a modern, fully integrated LED Chip or LED Source

**Dimmable** – the luminaire is fluently dimmable by using your remote control or by using your smart device

**3 year warranty** – we provide a 3-year warranty on all NEO Zigbee lights  
**2 year warranty** – we provide a 2-year warranty on all NEO WiFi lights

**Degree of protection**

**Wireless charging** of mobile devices

**Voice control**

**CCT** – the luminaire can change temperature tones, from deep yellow to clear white by using the remote control or your smart device

**RGB** – the luminaire can change color (up to 16 million colors) using the remote control or by using your smart device

**Comes with power cord switch**

**Zigbee 3.0** – wireless technology for control of smart home devices, for control via application it is necessary to use Immax NEO PRO gateway p. 64

**Tuya** – allows to connect Wifi, Zigbee and Bluetooth devices into a single application such as IMMAX NEO PRO

**WiFi** – wireless technology for controlling smart home devices, no need to use a gateway to control via the app.

**Matter** – A smart home communication standard that supports different platforms communicating through different protocols. For full use, we recommend using the gateway 07117-4 Immax NEO MULTI BRIDGE PRO Smart Zigbee 3.0 Matter

**SMART WIFI system with BEACON support**  
This is wireless control using the Bluetooth protocol. Using the remote control, you can CONTROL the light or bulb remotely:  
- It is not necessary to aim the DO at the product (range approx. 20m)  
- Control up to 30 products with one controller.  
- There is no need to own a gate (Bridge).

# Perfecto

A black and white metal lamp with several lateral openings that slightly scatters the light to the sides as well. Advanced technology in the ceiling unit, communicating wirelessly using Wi-fi on the Tuya protocol, will enable the integration of the luminaire into the Immax NEO PRO application. Even from a distance, it will help you create the ideal lighting that you expect in a given situation.

# Pared

This outdoor light is equipped with an energy-saving Immax GU10 LED bulb, which shines with a pleasant warm shade or RGB. PARED perfectly illuminates any exterior and does not disrupt the design of the house in any way, on the contrary, the warm white color glows around the house and makes both your arrival through the front door, or just sitting on the terrace, more pleasant.

**All B-series packages include bulb 07724L**  
NEO Smart colour, dimmable, 2700K - 6500K WiFi

## Smart household with Immax NEO LITE

The Immax NEO LITE system is the most modern solution in the 'smart-home' field. Intelligent home control lets you control smart lighting, home camcorders, extension cords, televisions or air conditioning. You are always in control of everything on your phone and tablet.

The charm of the Immax NEO LITE lies in its ability to communicate effectively with any device. The system uses a WiFi network and does not need a central unit. Thanks to this, it is also compatible with, and 'understands', the products of various manufacturers.

### Safety first

The Immax NEO LITE system focuses primarily on home security. A clever outdoor camera protects the surroundings of the house from uninvited guests. A 360° viewing angle and two-way communication are the main advantages. It can be controlled via a smartphone, including the ability to record. You can find similar features with the video intercom. Even though you may be far from home, you still find out who is standing outside the door. Everything can be monitored using the integrated camera, which also offers motion detection. Two-way audio communication is a matter of course. The smart system of the garage door allows easy remote control. If you are approaching the house, just one click and the door will open. Plus, you'll always be sure you don't forget to close them afterwards. If someone attempts to manipulate them, you will find out immediately.

### Remote control of electronic devices

Smart extension cords and electrical sockets are very useful products that must not be missing in any household. Just connect your electronic appliances via these devices and you can

control and monitor them remotely. Thanks to the application, you can also automate the activation of individual appliances and monitor energy consumption.

Not sure if you really turned off the iron? If you have to do is open the application, check everything and, if necessary, simply switch off the socket to which the iron is connected - remotely. If you go away for a long time, set the lights on and off so that your household does not appear abandoned and does not unnecessarily attract uninvited guests.

### Communication with others

The basis of the Immax NEO LITE system is a unified language. It uses a local WiFi network for communication. All devices are then compatible with Amazon Alexa voice assistants, Apple Siri short-cuts, Google Assistant and more.

### One application rules all

Individual products can be easily controlled using the Immax NEO PRO application. It is available on iOS and Android. Operation is easy and the devices can be controlled using preset programs.
